

Contents

Introduction	1
1 Fluctuations in Quantum Mechanics	5
1.1 Wave Mechanics and Fluctuations	5
1.1.1 The Uncertainty Principle	6
1.2 Quantum Harmonic Oscillators and Fluctuations	9
1.2.1 Fluctuations and Ground States	10
1.3 Mixing Classical and Quantum Fluctuations	12
2 Quantum Properties of the Electromagnetic Field	19
2.1 The Quantum Properties of Electromagnetic Radiation	19
2.1.1 The Einstein Coefficients	20
2.1.2 The Planck Distribution Law and the Zero-Point Fluctuations	23
2.1.3 Canonical Field Quantization in the Coulomb Gauge	24
2.1.4 The Planck Distribution in Modern Terms	26
2.2 The Casimir Effect in its Original Formulation	27
2.2.1 Physical Meaning of the Regularization Procedure	31
2.2.1.1 The Subtraction of $\mathcal{E}(L \rightarrow \infty)$	31
2.2.1.2 The Introduction of a Cutoff Function.	33
2.2.1.3 The Limitation of Casimir's Approach	33
2.3 Historical Curiosities	33
2.4 Modern research around the Casimir effect	34
3 Elements of the Theory of Stochastic Processes	45
3.1 Probability Distributions and their Properties	45
3.1.1 Moments and Cumulants	47
3.1.2 Stationarity	48
3.1.3 Gaussian Processes	49
3.1.3.1 The Central Limit Theorem	49
3.1.4 Markov Processes	50
3.1.5 Gaussian Stationary Markov Processes	50
3.2 The Master Equation	52
3.3 Wiener-Khintchin Theorem	55

3.4	Classical Description of Decay Processes	56
3.5	Brownian Motion	57
3.5.1	Langevin's Equation	58
4	Quantum stochastic methods	65
4.1	Introduction	66
4.2	The open-system paradigm	66
4.2.1	A quantum environment	67
4.3	The quantum Langevin equation	69
4.3.1	Quantum statistics	70
4.3.1.1	Stationarity	71
4.3.1.2	Gaussianity	71
4.3.1.3	Thermal correlation	72
4.3.2	Alternative models for a linear environment	75
4.4	The Fluctuation-Dissipation theorem	76
4.4.1	Mathematical derivation	76
4.4.2	Susceptibility and linear response theory	79
4.4.3	FDT of first and second kind	80
4.5	The time evolution of the density matrix	82
4.5.1	The quantum master equation	83
4.5.1.1	Comparing the two approaches and understanding the approximations	87
4.5.2	Linear coupling	88
4.5.2.1	Dissipative behavior of a two level system	90
5	Atoms interacting with the electromagnetic field	97
5.1	Introduction	98
5.2	Atoms interacting with the electromagnetic field	98
5.2.1	Field's dynamics in vacuum	99
5.2.2	A simple semiclassical non relativistic description of the atoms's internal dynamics	100
5.2.2.1	A causal theory of radiation reaction in vacuum	103
5.2.3	The non-relativistic Lamb shift	105
5.3	Atomic dynamics near linear macroscopic bodies	108
5.3.1	Field's dynamics near dissipative objects	108
5.3.2	Dissipative dynamic of a two-level system	111
5.3.2.1	A Langevin-like approach to the two-level system dynamics	114
5.4	The Casimir-Polder interaction	117
5.4.1	Energy of a polarizable particle in an electromagnetic field	119
5.4.2	Polarizability tensor	123
5.4.2.1	Atoms	123
5.4.2.2	Nanospheres	124
5.4.3	Perturbative approach	125
5.5	Atoms and a planar surface	127

5.5.1	Behaviour of the scattered Green function	127
5.5.1.1	Distance dependence of the Green tensor	128
5.5.2	Asymptotic power laws	130
6	Interactions between extended objects	139
6.1	Introduction	139
6.2	The Casimir effect in realistic configurations	141
6.2.1	Electromagnetic stress tensor and radiation pressure	142
6.2.2	A dispersive non dissipative case: the plasma model	146
6.2.3	From Casimir to Casimir-Polder: Diluted limit	149
6.3	The Casimir energy as a sum over the frequency modes of a real cavity	150
6.3.1	Physical properties of the electromagnetic modes in a non dissipative metallic cavity	153
6.4	The Casimir free energy in the scattering approach	155
7	nonequilibrium fluctuation-induced phenomena	163
7.1	Beyond equilibrium	164
7.2	Atoms in a given state and field in thermal equilibrium	164
7.3	Particles moving with constant velocity	166
7.3.1	Black body friction	167
7.3.2	Quantum friction	168
7.4	Fields out of equilibrium	171
7.4.1	Heat transfer	172
7.4.2	Fluctuation electrodynamics and radiative forces	173
7.5	Accelerated systems	176
7.5.1	The Unruh effect	177
7.5.2	The Hawking radiation	181
7.5.3	The dynamical Casimir effect	182
